

Veradigm® Guided Scheduling

In today's healthcare environment, optimizing provider schedules is a top priority. In doing so, it can help improve outcomes, such as operational efficiency and overall practice profitability.

Using proven principles from the airline industry, Veradigm Guided Scheduling can identify and schedule patients with urgent needs faster, while potentially increasing revenue and streamlining operations.

Highlights of Veradigm Guided Scheduling:

With full integration within Veradigm® Practice Management, Guided Scheduling ensures patients who need care the most have access to appointments—even at the last minute.

Schedules are managed based on predicted demand, ensuring schedule slots are not left empty due to demand changes. Patient visits are distributed across multiple resources.

Optimization Readiness provides algorithms and predictive analytics for a practice data assessment, giving insights into potential opportunities and scheduling efficiencies.

Guided Scheduling helps organizations achieve operational efficiency by prioritizing visits for patients who need care the most, which accelerates revenue and ensures high quality care delivery that maximizes operational efficiency.

Ongoing improvements include post go-live adoption reporting to ensure smooth implementation; and monthly operational reporting and quarterly performance reporting to deliver organizations multi-faceted insights into how the practice is improving.
